

## Are your cats' safety and health threatened by:

- Neighbourhood bullies?
- Busy roads or wild woodland?
- Straying too far, or getting trapped?
- Contracting diseases or harbouring parasites?

Do you want to give your cat the freedom of your garden but not beyond?

**Now, there is a simple but effective solution!**

# Katsecure

This innovative fencing system allows you to secure your garden elegantly and compassionately, confining your cat's wanderings to the relative safety of your own garden.

This is not as impossible as it sounds, nor indeed costly.

The product can be self installed, but if required we can carry out garden surveys for estimates and offer an installation service.

**Call now  
to find out  
more.**

Katsecure is an innovative extension piece that can easily be fitted to existing garden fences and walls.

Katsecure works by positioning two wooden poles onto existing or new garden fences or walls. The poles work by rotating when touched, denying cats the necessary grip to attempt climbing over the fence. This simple mechanism prevents the cat from gaining the "pawhold" it needs to scale and jump over.

gremlins out!**

# Katzecure . . .

secure from invading . . .  
. . . cure for straying

## Secure from bullies?

Your cat's potential bullies come in all shapes and sizes, other cats (especially un-neutered marauding ferals), unfriendly dogs, foxes, and garden loving neighbours who regard cats as pests.

**Don't be afraid to let your cat enjoy the security of your garden. With Katzecure protection you can keep these dangers at bay.**

## Secure from traffic?

Road traffic accidents are the number one killer of cats. They are particularly vulnerable at night, when they are easily dazzled by headlights. Even cats out and about during daylight hours, are prone to running blindly across the road in front of oncoming traffic. Some cats in urban areas do become streetwise and learn to avoid traffic, but many thousands more do not.

**Don't let your cat be one of them. Keep them secure in your garden with Katzecure protection.**

## Secure from straying?

Containing cats has many advantages. Statistics show that on average restricted cats live longer than those allowed to roam at will.

Road traffic accidents, violent encounters with dogs, becoming locked in outhouses, territorial fights are just a few unpleasant events that can be avoided. Also, cats that socialise with others outside their family have more chance of exposure to AIDS and parasites.

**Katzecure offers your cat the protection it needs from today's dangerous world.**

## Our solution is . . .

- **Humane.** Does not hurt cats.
- **Elegant.** Unobtrusively fits in with your garden surroundings.
- **Flexible.** Adaptable to any garden configuration (trees, sheds, storage passageways, etc).
- **Comprehensive.** All gardens may be surveyed and a bespoke design agreed.

Variety of mounting systems (on top, internal, staggered). Fits to different types of fencing and walls.

## An explanation of the Katzecure mounting schemes . . .

Katzecure Ltd. offers a number of different installation options, depending on the degree of containment required and the agility level of the cat. Single Pole is the entry level. The Double Pole System is the next level up suitable for the more agile and adventurous cat and is the system we recommend for most breeds. Your choice of system is dependent on the age, activity level and taste for adventure of your cat.

### No one knows a cat like its owner!

**Once installed, the Katzecure system needs very little maintenance and can be removed and taken with you if you decide to move house.**
