

Standard Axle **£7.00 pair**

Two 10mm axles with plastic bearing and retainer springs.

Deluxe Axle **£12.00 pair**

Two 10mm axles with ball race and retainer springs.

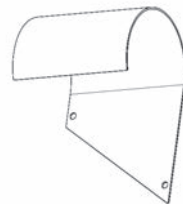

Pole End Sleeves (for wooden poles) **£8.00 pair**
Pole End Sleeves (for plastic poles) **£7.00 pair**

The Pole End Sleeves are only fitted to the upper row of wooden poles, unless they are also specifically requested for the lower row for aesthetic reasons. The plastic Pole End Sleeves are required for both ends of all plastic poles.

Drilling Jig **£12.00**

Tool used as a guide to ensure the correct location of the 10mm axle holes in the end of the Katzecure poles.

End Protector (Right/Left) **£12.00**

These parts fit to the outer corner brackets or to the single sided double brackets, they offer added protection for particularly adventurous cats (Houdinis) that might attempt to escape via these points.

What is Katzecure?

Katzecure is a unique, unobtrusive cat containment system designed to safely prevent your cat from scaling over garden perimeter structures. To ensure effectiveness, all exposed areas and gaps need to be identified and made secure, including any trees, sheds or other garden structures.

The system is available directly from us or one of our distributors as a DIY kit with the required components and installation instructions. Alternatively we provide a full installation service (ask for details).

How does Katzecure work?

The system works simply by attaching two robust wooden or plastic poles to an existing fence or wall. The poles spin on contact and prevent your agile cat from gaining the necessary 'pawhold' needed to scale the fence and jump over. The system is attached to the fence using gravel boards or backing boards for added robustness. Installing the system around the entire garden or all exposed areas makes the garden secure.

The system comprises these components:

- Brackets (double, corners)
- Protectors (for corners and ends)
- Axles
 - standard (solid plastic bearing enabling easy rotation)
 - deluxe (with ball bearing for added spin rate and speed)
- Pole end sleeves (to ensure continuous run)
- Standard wooden or plastic poles (75mm diameter machine round poles)
- Gravel board (150 by 25mm board)
- Trellising (if required to raise fence structures)
- Meshing (if required to plug any gaps).
- Plastic plugs.

We also manufacture custom components to secure awkward and angles and gaps.
